Web-based Asset Management & Tracking

**Keep your trucks on schedule, your employees honest and your customers happy!**

WebTracks<sup>24/7</sup> by AnalyGIS, LLC is a web-based tracking and mapping application designed to monitor assets and to aid in route planning, dispatch, and personnel management.

Built around open-source Geographic Information Systems (GIS) technology, WebTracks<sup>24/7</sup> is an affordable alternative to other tracking applications in the marketplace that require recurring license fees. This savings is passed on to you – our valued customers.

In addition to real-time tracking capabilities, WebTracks<sup>24/7</sup> delivers detailed maps including interstates, highways, major roads, residential roads, landmarks, cities and towns, and much more. Additionally, WebTracks<sup>24/7</sup> can leverage distributed geospatial datasets to provide everything from full color aerial imagery to the latest weather radar picture – all free of charge!

*Trucks can be thematically shaded to see where an asset has traveled. In this example, dark green indicates the asset's starting point, and red indicates its most recent location.*

Whether you are a pest control company interested in streamlining your dispatch process and optimizing technician service territories, or a healthcare equipment provider delivering medical supplies to hospice patients, WebTracks<sup>24/7</sup> can help you become more efficient in how your assets are managed, and ultimately improve your bottom line.

## WebTracks<sup>24/7</sup> is ideal for:

- ✓ Route Optimization
- ✓ Asset Tracking
- ✓ Monitoring Personnel
- ✓ Balancing Workloads

## Who's Using WebTracks<sup>24/7</sup>:

- ✓ Home Services
  - Heating / Cooling
  - Appliance Repair
  - Cable/Phone Installation
  - Pool Cleaning
  - Pest Control
  - Landscaping
- ✓ Distributors
  - Food Delivery
  - Retail Delivery
  - Bottled Water
  - Donation Pick-ups
  - Couriers
- ✓ Healthcare
  - Hospice / Home Care
  - Medical Equipment Rental
- ✓ Public Sector
  - Maintenance Crews
  - Meter Readers
  - Trash/Recycling Pick-up
  - Field Workers (Surveyors, Engineers, Rangers)
  - Security Personnel/Vehicles

## What's Required:

- ✓ Nextel® GPS-enabled mobile phone(s)
- ✓ Internet / Intranet Server

## How WebTracks<sup>24/7</sup> Operates

WebTracks<sup>24/7</sup> is a self-contained web application accessed via a standard Internet browser. The WebTracks<sup>24/7</sup> Administration Console allows administrators to acknowledge new trackable devices, which can then be assigned to user-defined divisions within an organization. Validated users can then log on to the WebTracks<sup>24/7</sup> Map Console and monitor those assets that have been assigned to their particular group. Because WebTracks<sup>24/7</sup> is a visual, map-based solution, managers can quickly identify problem areas such as inefficient routes, or employees that may not be using their time appropriately. Such problems can then be addressed immediately saving both time and money.

## Deployment

WebTracks<sup>24/7</sup> is licensed as a stand-alone application for organizations requiring asset-tracking capabilities. As such, WebTracks<sup>24/7</sup> is installed as part of the customer's Internet infrastructure, allowing for full in-house customization. For example, customers may add custom data layers such as customer locations, store locations, or sales territories. Once part of an organization's Internet presence, WebTracks<sup>24/7</sup> can be branded to provide a fully functional, yet seamlessly integrated and professional application ideal for Internet or Intranet use.

Free aerial imagery provides an eye-popping backdrop to real-time asset locations!

Name	City	State
Heating & Cooling	Phoenix	AZ
Plumbing	Phoenix	AZ

Device ID	Type	Name	Phone
4802217172	Motorola i88s	Truck 203	602-987-6543
4806776260	Motorola i88s	Truck 364	480-338-3388
9252996833	Motorola i88s	Truck 534	602-123-4567

Device ID	Last Broadcast	Longitude	Latitude	Speed	Heading	Altitude

- Multiple divisions within a single organization
- Active devices assigned to division 1 (Heating & Cooling)
- Available, non-active devices

The WebTracks<sup>24/7</sup> Administration Console allows administrators to assign assets to specific groups or divisions within an organization. Each asset is described in detail with a unique ID, device type, phone number and most recent location (latitude and longitude coordinates). Validated users can then view all activated devices on the Map Console.
